

## SHREYANS JAIN

[shreyansjain.work@gmail.com](mailto:shreyansjain.work@gmail.com) | [linkedin.com/in/shrejac](https://www.linkedin.com/in/shrejac) | [github.com/ShreyansJa1n](https://github.com/ShreyansJa1n) | [shreyansja1n.github.io](https://shreyansja1n.github.io)

### EDUCATION

**Northeastern University, Boston, MA** | Master of Science in Computer Science | GPA: 3.94 | Sept 2024-August 2026  
Relevant Coursework: Mobile App Development (iOS), Programming Design Paradigms, Algorithms, DBMS  
**NIIT University, India** | Bachelor of Technology in Computer Science | Aug 2018-May 2022

### PROFESSIONAL EXPERIENCE

**Lose It!** | iOS Software Engineer Co-op | Boston, MA | Sept 2025-Dec 2025

- Achieved zero critical incidents across weekly releases to 50M+ users, as measured by Sentry error rates and App Store stability metrics, by owning end-to-end iOS release cycles, on-call workflows, and using **Instruments** to profile and resolve performance bottlenecks before production
- Generated \$100K+ in revenue within 10 days, as measured by A/B test conversion analytics, by building the Deal Center feature end-to-end using Swift, SwiftUI, and **Combine** for reactive data binding across paywall and pricing experiment flows
- Improved onboarding completion rate by 15%, as measured by funnel analytics, by rebuilding onboarding flows with Lottie, and **ReactiveSwift** for state management while implementing VoiceOver accessibility across 30+ screens (~90% coverage)
- Reduced technical debt across 18K+ lines of legacy code, as measured by SonarQube maintainability scores, by migrating Objective-C/UIKit surfaces to Swift/SwiftUI using MVVM architecture and enforcing **SwiftLint** standards
- Accelerated release documentation turnaround by 60%, as measured by release cycle time, by building internal AI-assisted tooling that automated release notes generation while maintaining compliance standards
- Improved network reliability and reduced API-related crashes by 25%, as measured by Sentry network error tracking, by refactoring REST API integrations using **Alamofire** with centralized error handling and retry logic

**Trellix** | Software Development Engineer | India | Aug 2022-Aug 2024

- Improved data pipeline reliability for 30% of enterprise customers, as measured by reduced data loss incidents, by designing and iterating on the EventStreamer module with secure, loss-resistant architecture suitable for regulated environments
- Achieved organization-wide adoption of standardized deployment patterns, as measured by team onboarding metrics, by designing Docker-based CI/CD pipelines that improved consistency, traceability, and operational compliance
- Reduced average issue resolution time by 50%, as measured by internal ticketing metrics, by building developer productivity tools and automating debugging workflows using Python and shell scripting
- Maintained 99.9% uptime during critical production incidents, as measured by SLA compliance, by working directly with enterprise clients to debug issues on-site, deliver hot fixes, and ensure continuity of secure systems

### PROJECTS

**ProximityLink** - [github.com/ShreyansJa1n/ProximityLink](https://github.com/ShreyansJa1n/ProximityLink) | CoreBluetooth, Swift, SwiftUI, Combine, MVVM

- Built a dual-mode BLE app supporting real-time device scanning and beacon broadcasting, by implementing both **CoreBluetooth** Central and Peripheral Manager APIs with background mode support
- Enabled live proximity estimation with signal strength visualization, by calculating distance using a log-distance path loss model and categorizing RSSI into user-friendly tiers
- Achieved responsive, auto-updating UI without manual refresh logic, by architecting a **Combine**-based reactive pipeline that streams BLE hardware events directly to SwiftUI views
- Improved reliability for dynamic device environments, by implementing automatic stale device cleanup and graceful Bluetooth permission and state error handling

**ShapeTracer – Multimodal iOS Tracing App** - [github.com/ShreyansJa1n/ShapeTracer](https://github.com/ShreyansJa1n/ShapeTracer) | Swift, SwiftUI, Core Haptics, XCTest

- Built a fully featured iOS app showcasing advanced system integrations, by combining Core Haptics, AVFoundation, and custom CoreGraphics rendering in SwiftUI
- Achieved 90%+ test coverage and high reliability, by designing modular components and validating pipelines with XCTest
- Improved scalability and code clarity, by applying SOLID principles and strict separation of concerns

**Stock Market Simulator for iOS** - [github.com/ShreyansJa1n/StockMarketSimulator-iOS](https://github.com/ShreyansJa1n/StockMarketSimulator-iOS) | Swift, UIKit, Xcode, Firebase

- Delivered a secure, production-ready iOS simulator, by integrating real-time market data via REST APIs and MVVM architecture
- Improved account security and user trust, implementing Firebase authentication with Face ID and Touch ID biometric support

**Government ID Scanner for Northeastern Recreation** | Google Cloud, React, Tailwind, Firebase

- Reduced user registration time by ~65%, by building a mobile-friendly ID scanner using Google Vision API and auto data extraction
- Lowered operational costs by 70%, by deploying a serverless, auto-scaling backend on Google Cloud Run supporting multiple iPads

### TECHNICAL SKILLS

|                                       |                                                                                        |
|---------------------------------------|----------------------------------------------------------------------------------------|
| <b>Programming Languages:</b>         | Swift, Objective-C, Java, Python, C++, JavaScript, TypeScript, Go, SQL, R              |
| <b>Libraries and Frameworks:</b>      | UIKit, SwiftUI, Core Bluetooth, Core Data, Express.js, FastAPI, Django, React, Flask   |
| <b>DevOps and Cloud Platforms:</b>    | AWS, Google Cloud, Xcode Cloud, Docker, Kubernetes, Terraform, Grafana, Jenkins, Kafka |
| <b>Developer Tools and Platforms:</b> | Xcode, Linux, Bash/Shell, SonarQube, Git, GitHub                                       |
| <b>Databases:</b>                     | MySQL, PostgreSQL, Firebase, MongoDB, Redis                                            |
